University of the Arctic Membership

Makivik's nomination for membership to the University of the Arctic (UArctic) was accepted following a presentation by George Berthe at the 12th meeting of the University of the Arctic council, held in Kiruna, Sweden August 11th to 14th, 2009.

While the UArctic is not a "bricks and mortar" institution, it is a cooperative network of universities, colleges, and other organizations committed to higher education and research in the North. Members share resources, facilities, and expertise to build post-secondary education programs that are relevant and accessible to northern students. The overall goal is to create a strong, sustainable circumpolar region by empowering northerners and northern communities through education and shared knowledge.

During his presentation, George elaborated on how several UArctic programs are directly relevant to various organizations and institutions that exist in Nunavik. He made particular mention of Makivik's Nunavik Research Centre (NRC) that could be able to provide expertise and knowledge to other UArctic members. As it is, the NRC collaborates closely in several studies with Government of Canada departments, provincial and territorial governments (Quebec, Ontario, Newfoundland and Labrador and Nunavut), Nunavik regional organizations, several Canadian universities (Laval, Calgary, Saskatchewan, Alberta, McGill, Waterloo, Trent, and Montreal) and with international organizations. The NRC also plays a significant role in the International Polar Year.

BOB MESHER X4

With Makivik's expertise, it is envisaged that programs on a case-by-case basis could be offered to students of UArctic institutions. Makivik and other Nunavik organizations could then have the opportunity to work collaboratively on relevant Arctic issues such as global change, applied traditional subsistence, and eco-tourism, etc.

George Berthe also had an opportunity to share ideas and observations with representatives of the Sami of Sweden during his trip to Kiruna, which included a visit to a reindeer ranch and other Sami cultural facilities. ■

Cruising Through the Northwest Passage

There were approximately 95 adventurous Arctic enthusiasts from around the world aboard the *Lyubov Orlova* for her inaugural trip through the Northwest Passage during the end of August-early September, including a film crew doing a story about the journey and Cruise North, to promote within the Olympics and the Canadian Tourism Commission's general tourism marketing efforts.

The ship's log for September 1st, 2009 recounts: "… the Cruise North flag at the ship's bow was replaced with a Canadian flag. As it was being run up in the lashing winds, a "Franglais" version of the Canadian National Anthem could be heard on the bridge, followed by a few bars of the Russian Anthem."

The Russian-owned *Lyubov Orlova* is leased each summer by Makivik subsidiary company Cruise North. It was an important feat for the ship to be able to say we made it through the Passage in view of climate changing conditions that are expected to permit increasing navigation through these waters during the years to come. Canadian Inuit settlements surrounding either side of the Northwest Passage are the main reason that Canada can lay claim to the Passage and the Arctic Archipelago. It has been homeland of Inuit for thousands of years, so it is important for an Inuit company to welcome international guests to experience the rich history and significance of the area, rather than a foreign company which does not represent the region through Inuit eyes.

The ice class *Lyubov Orlova* ran into multi-year ice at the start of the passage and luckily the Canadian Coast Guard vessel *Sir Wilfred Laurier* was close enough to meet the ship and break her through the Passage, which made for an was an exciting day for our passengers.

During this journey they were fortunate to see 28 polar bears, caribou, muskox, whales, and even a pod of orca whales — a rare treat in the region! Stops at historic sites included Beechy Island and Fort Ross, as well as scenically beautiful spots such as Somerset Island and Bellot Straight.

Cruise North president Dugald Wells recalls, "While we were bracing ourselves for a potentially difficult trip, given the amount of ice in the area at the time, our exceptional expedition team and ship crew, along with the Canadian Coast Guard, pulled together an unforgettable trip for our happy passengers."

gers (and new friends), eating properly, dressing neatly, and the unexpected heartaches or "bad days" that happen to everybody else no matter who they are or where they are living. Upon reflection, a graduating student is always proud of their effort and realizes that their struggles through college were well worth it. And of course there are few events quite as wonderful for the family of a graduating student than to see their loved one succeed!

It is also a proud event for Makivik and other Nunavik organizations. For instance this is why Makivik supports postsecondary students with a special scholarship fund as well as computer needs. The staff of KSB's Student Service Department certainly do their part to make life pleasurable and

A Glimpse of Student Life

Although going to college down south can sometimes be invigorating, it is not always easy or just fun. Very soon the students find out that there is plenty of homework to do and that homework must be finished by a specific day, no matter what. And there are exams to write on a specific day so students must study and be prepared for the exam on that day, no matter what. The homework assignments must be properly researched and written and the answers on the exams have to be correct in order to pass the exam. Basically this is what it is all about; which is why we always say that a student "earns" their diploma. The student does the work and the diploma is their reward for doing the work correctly.

In the meantime students have to deal with other parts of their life besides sitting in the classrooms, managing their time for homework assignments, reading, and writing. For instance there is often homesickness, getting used to being amongst so many strangers interesting for them, despite the challenges these young Inuit from Nunavik have signed up for. Aurélie Brisebois is the activity animator for

Youth

The Marie-Victorin College students, who are studying in French, also went to Radio-Canada because Elisapie Isaac was recording a television show where she was being interviewed by TV personality Rebecca Mckonnen. Unfortunately, she could not stay after the show so they were unable to take pictures with her. The show was on TV this past October 4th. Elisapie's new CD, "There will be Stars", is her first solo recording and is the much anticipated follow up to the internationally acclaimed, award winning duo *Taima* which she co-founded with Alain Auger in 2001. Elisapie welcomed the Inuit students that came to the recording.

KSB who organizes activities every two weeks during the school year to facilitate communication between all the Nunavik students that are studying in Montreal. Particularly in this issue we feature several pictures of students taken at the beginning of the new school year at Marie-Victorin College and some of an activity that they attended at La Ronde Amusement Park on August 24th where all the students for the 2009-2010 year were invited.

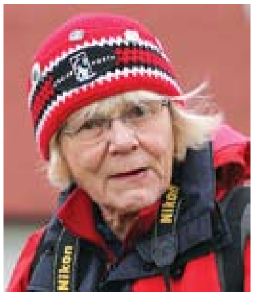
Louisa Tookalak, one of Several Outstanding Cruise North Trainees

By Susan Aiken, Cruise North Botanist

Louisa Tookalak graduated from high school in Puvirnituq in 2009. One of her high school teachers had encouraged her to apply to the Cruise North Trainees Program. On July 2nd, she arrived in St. John's, Newfoundland and joined the ship, *Lyubov Orlova*. At first, she was overwhelmed and homesick for her family, in particular her little sisters. When the ship sailed from St John's into the swells of the Atlantic she was incapacitated with seasickness and was really miserable. She responded well to seasickness medication and gradually came to understand ship life and what was expected of her. She was helped because several people on board spoke Inuktitut. Elder Tivi Etok, who was on board, spoke only Inuktittut.

Louisa's job included eating meals with passengers and answering questions they would ask. She did this with poise and pride telling people about where she lived, what she had done at high school and what she planned to do after leaving the ship. When she told of being accepted into a course to become a heavy equipment mechanic, she was asked how this had happened. Louisa modestly replied, "They wanted to have a girl in the program." For many passengers, Louisa was one of the first Inuit they met. She was an interesting and excellent ambassador for Nunavik.



In Kujjuaq at the end of the cruise from St John's, Louisa phoned her parents and learned they were about to leave for their summer camp on Mansel Island. It was possible that the ship might go there on the way to or from Churchill. This happened on the return cruise. That night that plans

for a landing next day on Mansel Island were given to passengers and pictures from a 2006 landing were shown.

These included a picture of two tents pitched near the shore. Jason Annahatak was a Cruise North trainee that year and he approached the tents speaking Inuktittut to the people staying there. He was invited in and returned to the ship and reported that the large tent had "everything — even a TV!" When Louisa was told of this incident she replied proudly, "That's my Dad!"

In 2009, Louisa addressed the room full of passengers and other staff saying, "I have been going to Mansel Island every year since I was about three years old". She told people that the family had a cabin well inland from the beach and that at first she was so afraid of polar bears that she spent most of her time on the island in the cabin.

The next day as the Zodiacs approached the landing at Mansel Island it was very obvious that there were no tents and nobody around. Louisa, and everyone present, who hoped she would find her family, felt sorry. With people who wanted a strenuous walk Louisa headed inland towards her family's cabin. They were soon out of sight. Meanwhile, people who were taking a gentle walk had just left the shore when they turned and saw a freighter canoe approaching. The silhouette suggested two parents and four "little sisters".

When they landed they told of being down the coast and seeing the ship in the distance. They had come to try and see Louisa.

Louisa's father produced an all terrain vehicle and a wagon and the family took off to drive inland looking for Louisa. Even on

Name:	**Louisa A. Tookalak**
Date of birth:	October 27th, 1989
Place of birth:	Puvirnituq
Home community:	Puvirnituq
Favorite person:	My sister Brenda
Favorite food:	Boiled caribou with missuraq
Favorite sport:	Volleyball
Occupation:	Trainee, Cruise North Expeditions
Future goal:	To become a heavy equipment mechanic
Toughest challenge:	The loss of my cousin Victoria
Pet peeve:	Mosquitoes

the very flat island they soon disappeared in the distance.

Passengers resumed their walking looking for plants. Mansel Island has been rebounding out of Hudson Bay since the last ice age and the shoreline is a series of beach ridges. There are few plants on the exposed tops of the ridges, but areas of continuous plant growth on the lower ground between the ridges.

Some passengers went sea kayaking, others ventured in for a swim. It was a very pleasant afternoon but too soon it was time to return to the ship. And that is when we discovered Louisa and her parents had found each other. The family was persuaded to line up for a pictures and everyone saw exactly why Louisa is so fond of her four little sisters.

From then on Louisa flourished in her Cruise North Adventures. In Douglas Harbour she joined others and went swimming off the ship.

Louisa also worked on the ship for the *Students on Ice Program* cruise. When she left the ship in Iqaluit, on August 12th she reported enthusiastically that she has been asked back to work on the ship next year. With her heavy mechanics training she may be helping the Russian crew repair the ships engines! ■

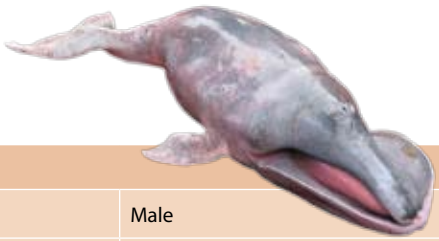
Bowhead Whale Harvest 2009

Here we provide some details about the whale that was harvested between August 20th and August 25th, 2009 near Kangiqsujuaq. Also included are answers to some questions that were asked during the harvest.



VINCENT CORMIER

General facts	
Gender	Adult female with a fetus
Total length	17.3 metres (or 56.9 feet)
Width of flukes (tail)	5.7 metres or (18.6 feet)
Circumference of the whale under the flippers	10.2 metres (or 33.6 feet)
Length of the longest baleens	3.48 metres (or 11.5 feet)
Blubber thickness	20 to 33 centimetres (or 7.9 inches to 13 inches)
Skin thickness	2 centimetres (or 0.8 inches)

Fetus	
Gender	Male
Total length	1,55 metres (or 5 feet)
Width of flukes (tail)	51 centimetres (or 1.7 feet)
Circumference of the whale under the flippers	1.03 metres (or 3.5 feet)
Length of the longest baleens	No baleens
Blubber thickness	2.2 to 2.4 centimetres (or 0.9 feet)
Weight	65.8 kilograms (or 146 pounds)

ᓂᕆᔨᖏᑎᒋᑦ ᐊᓐᓂᑐᐊᒥᓂᖅ, ᐅᑯᐊ ᐊᖏᔪᓕᓂᒋᑦ ᑲᔪᓯᑎᑦ ᑎᑭᓕᐅᕐᓂᒥᑦ ᑎᑭᓕᓄᑦᓯᐊᓕᒥᑦ ᐊᐅᓚᔪᓂ 27ᒥ ᐃᓗᐅᕕᒃᓴᒥᐅᑦ ᐊᖏᔪᐃᓕᓂᖅᓴᒥᒃ ᒪᑕᑐᖃᓕᖏᓐᓂᖅ ᑎᑭᐅᑦᓯᓂᑎᖅ.
ᐊᒥᓂᓂ ᓄᓇᕗᐅᑦ ᓄᓇᓕᖏᓐᓂ ᐱᓂᒪᓴᑦ ᐊᖏᔪᓕᖏᓐᓄᑐᒃ ᐃᑲᔫᑦᑐᓂᓕᕆᔨᓴᖏᓐᓂᑦ ᓇᔨᒪᒐ ᐊᖏᔪᓕᖏᓐᓂᖅᓯᒃ ᐱᑦᓂᒋᐊᒃᑲᓐᓂᕐᒥᓂᖅ ᐱᓕᕆᔨᒃᑲᓐᓂᕐᓂᖅ ᐱᓕᕆᓂᒃᑲᓐᓂᕐᒥᓂᖅ.
Sharing the harvest, these hunters arrived from Kangiqsujuaq on August 27th with muttaq for Ivujivik. It was thanks to the participation from all Nunavik communities that the project was managed effectively.

PIERRE CARTER

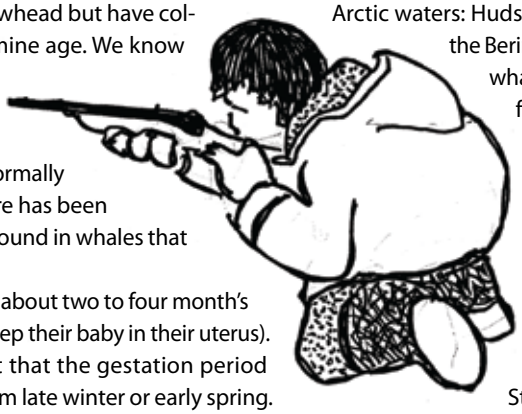
MANON SIMARD

ᐊᖏᓂᐊᖅᑎᑎᕐᓂᓂᒃᑲᓂᖅ ᐊᖏᔪᓂᖅᑕᐅᖅᑎᑎᑦᑐᑦ ᓄᓇᕗᒻᒥ ᐊᖏᕐᑐᑦ ᐁᖏᐱᐅᑎᖅᓴᓂᒃ ᐊᖏᕐᓇᓂᖅᓯᓗᒃ ᑭᖅᔪᕐᖅᔪᖅᑎᑎᑦᑐᑦ ᐅᓄᖏᑦ ᐊᓂᔪᖏᓪᓕᓐᓂᑦ ᑭᓯᐊᓂ ᐱᐅᐊᓂ ᐱᐅᓂᖅᑕᑦᑭᓯᖅᑕᐅᓕᖏᓪᓕᐊᓕᒃ.
The crew posed for a group photo following the success of Nunavik's second bowhead whale hunt in several generations.

Aging the bowhead

At the time of writing, biologists at the Nunavik Research Centre do not know the age of the bowhead but have collected the eyes for analyses to determine age. We know that bowhead whales reach their sexual maturity at 25 years old. At that age, females should be about 13 to 13.5 metres long, whereas males are normally 12 to 13 metres long. Incidentally there has been some ivory and stone harpoon heads found in whales that were dated to be over 100 years old.

We can assume that the fetus was about two to four month's gestation (the time bowhead whales keep their baby in their uterus). This speculation is based on the fact that the gestation period lasts from 12 to 16 months starting from late winter or early spring. Bowheads give birth to their calves between April and June. Calves measure 4 to 4.5 metres at birth. This fetus was only 1.5 metres long and had no baleens; therefore it was not fully developed.



SAMMY KUDLUK

Bowhead winter migration

There are three populations of bowhead whales in Canadian Arctic waters: Hudson Bay-Foxe Basin, Davis Strait-Baffin Bay and the Bering-Chukchi-Beaufort populations. The bowhead whales harvested in Nunavik are assumed to come from the Hudson Bay-Foxe Basin population. We will only know after DNA analyses are completed. Bowhead whales of this population come together in summer in northwestern Hudson Bay, especially in the Repulse Bay, Frozen Strait, Foxe Basin and Igloolik areas. Smaller groups also gather around Mansel and Ottawa Islands. Some animals migrate to northeastern Hudson Bay and Hudson Strait for the winter. As the population grows, the whales disperse into other areas that have not seen populations in many years, which might explain the small numbers that are found in the Hudson Strait in the summer and fall seasons. ■
